

AMP7610849L

80 W FM Linear Power Amplifier Module 76 ... 108 MHz

Features

- compact design
- high dynamic
- current and temperature monitoring
- STATUS signalling
- reverse polarity protection
- appropriate heat-sink available

Applications

- FM/IBOC TX amplifier
- Multicarrier
- Repeaters
- Driver for radiating cables

At a Glance

AMP7610849L from Becker Nachrichtentechnik is a compact amplifier module specially designed for professional FM or IBOC broadcast radio applications. The robust electric and mechanic design guarantees solid operations over a long time. Internal filters and low noise voltage supplies offer high suppression of spurious. To avoid damages during installation the supply is protected against reverse polarity. The amplifier module is supplied with a single DC voltage, which presence is indicated by a LED on the module as well as the module status. The RF connectors are SMA female type. AMP7610849L is designed for mounting on an external heat sink. All amplifier models of the AMP series are designed in 50 Ohm technology.

Special Features

The high IP3 properties make the amplifier module suitable in professional applications where digital modulated signals or multi carrier signals must amplified without any distortion effects.

An internal self-test function monitors current consumption and module temperature. In the case of exceeding limits an open drain output is opened and the status is signalized by the LED at the module.

Designed for mounting on external heat sink.

Tolerant to Mismatches

Using power transistors with enough head room to maximum ratings make the amplifier module robust against reverse power and therefore robust against loads at the output which are not matched. The output of the amplifier module is robust against open and short load at the output.

Rugged Design

The amplifier is housed is a milled aluminium case. This saves the circuits against mechanical damage and gives best shielding for avoiding EMI influences caused by radio signals coming from the environment. The standard module is designed for mounting on a heat sink provided by the customer. Alternatively, an appropriate heat-sink is available.
