

# RSWU-2SP4TS+

2 Channel SP4T Switches plus 1 Channel SPDT Switch, Non-reflective,  
100 kHz ... 8500 MHz

## Features

- extremely wideband
- high speed, wear-free semiconductor switches
- non reflective
- also usable as SP8T configuration

## Applications

- RF signal routing
- RF switching fields and matrices
- R&D (Research & Development)
- radio monitoring
- production

## Scope

The RSWU-2SP4TS+ is a two channel SP4T RF switch with an additional SPDT RF switch, suitable for the frequency range 100 kHz ... 8500 MHz in 50 ohms technology. All switches are non-reflective, they offer also termination in the open states.

RSWU-2SP4TS+ is designed as a slide-in module for integration into the SR6-11C system platform. In combination with the SR6-CU controller module it can be easily controlled with ASCII strings.

## Principal Block Diagram

The RSWU-2SP4TS+ has 3 independent RF switches, two SP4Ts and one SPDT. The module offers high isolation between the switch channels. They can operate with different signals without mutual influence. The switches also can combine to a SP8T switch configuration via 2 short external RF cables.

## Wear-free Semiconductor Switches

The switching elements in the RSWU-2SP4TS+ are solid state type. This ensures a short switching time and a huge number of switching cycles with a minimum of maintenance.

## Synchronous Operation

In combination with the SR6-CU controller, the execution of commands can be done in two ways:

- Direct execution after receiving single commands.
- Synchronous command execution via hardware, triggered by a SYNC command.

In synchronous execution mode, commands are received without execution. After receiving a SYNC command, all executions are done synchronous in micro seconds.

## Remote Control

In combination with the SR6-CU controller module, the RSWU-2SP4TS+ is remote controllable via standard interfaces USB and LAN with simple SCPI orientated ASCII strings.

## Built-In Test Function

Internal supply voltages are monitored. The module status can be read out via remote interface.

**RF Specification SP4T Channels**

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
impedance	$Z_{IN}/Z_{OUT}$		50		$\Omega$	
low frequency	$f_{MIN}$			100	kHz	
high frequency	$f_{MAX}$	8500			MHz	
insertion loss	$S_{21}, S_{12}$	-2.5	-1.4		dB	$f \leq 3000$ MHz
	$S_{21}, S_{12}$	-3.8	-2.1		dB	$3000 \text{ MHz} < f \leq 6000$ MHz
	$S_{21}, S_{12}$	-5.8	-3.3		dB	$f > 6000$ MHz
return loss	$S_{11}, S_{22}$		-11	-6	dB	$f < 1$ MHz
	$S_{11}, S_{22}$		-17	-9	dB	$1 \text{ MHz} \leq f \leq 5000$ MHz
	$S_{11}, S_{22}$		-13	-7	dB	$5000 \text{ MHz} < f \leq 7500$ MHz
	$S_{11}, S_{22}$		-9	-5	dB	$7500 \text{ MHz} < f \leq 8500$ MHz
output & off isolation	$S_{NM}$		-50	-36	dB	$f \leq 3000$ MHz
	$S_{NM}$		-35	-27	dB	$3000 \text{ MHz} < f \leq 6000$ MHz
	$S_{NM}$		-30	-20	dB	$f > 6000$ MHz
channel isolation	$S_{ISO}$		-100	-90	dB	$f \leq 3000$ MHz
	$S_{ISO}$		-100	-85	dB	$3000 \text{ MHz} < f \leq 6000$ MHz
	$S_{ISO}$		-95	-80	dB	$f > 6000$ MHz
transfer power (CW, switch closed)	$P_{RFCW}$			+30	dBm	$f \geq 6$ MHz
transfer power (CW, hot switch)	$P_{RFHOT}$			+20	dBm	$f \geq 6$ MHz
	$P_{RFHOT}$			0	dBm	$f < 6$ MHz
terminated power (CW, switch open)	$P_{RFTERM}$			+20	dBm	$f \geq 6$ MHz
	$P_{RFTERM}$			0	dBm	$f < 6$ MHz
input IP3	IIP3		+56		dBm	@ 8000 MHz
input IP2	IIP2		+95		dBm	@ 8000 MHz
switch delay	$t_{50-50}$		4		$\mu s$	50 % trigger to 50 % RF
switch on time	$t_{10-90}$		4		$\mu s$	10 % RF to 90 % RF
switch off time	$t_{90-10}$		2		$\mu s$	90 % RF to 10 % RF

## Appearances

### SR6-11C System Platform

The RSWU-2SP4TS+ module is foreseen for the integration into the SR6-11C system platform. 11 slots in the SR6-11C can be used for modules like RF switches, matrices, multicouplers, attenuators, BIAS-Ts, level detectors, bi-directional splitters/combiners for signal conditioning and a controller unit. For the control of RSWU-2SP4TS+ module the SR6-CU controller unit is required.

Via the Trigger-IO interface at the rear side of the SR6-11C System Platform a synchronous operation in a device network of SR6-11C can be realized. After a positive TTL pulse slope at the trigger input, the preloaded configurations are executed only by hardware in micro seconds. In applications with very fast execution demands the hardware can be directly controlled via the binary interface on the rear side.
