BSWM-4X4ER

Bidirectional Blocking Wideband 4X4 Switching Matrix, 100 kHz … 8500 MHz

Features

- extremely wideband
- high isolation
- high dynamic
- non-reflective
- compact 19" 1U design
- graphical user interface

Applications

- MIMO test
- network investigation
- signal routing
- research & development (R&D)
- test equipment

At a Glance

Modern communication standards, including cellular Wi-Fi, ISM, and Bluetooth, require bidirectional signal transmissions regardless of the multiplexing method, whether TDD (Time Domain Division) or FDD (Frequency Domain Division). The BSWM-4X4ER offers an innovative and efficient routing solution for these communication systems, covering frequencies of over 8 GHz and providing four full parallel bidirectional signal paths.

AC or DC Power Supply Options

The BSWM-4X48ER comes in variants designed for either DC or AC mains power supply, catering to both stationary and mobile applications. Both variants support a broad input voltage range, whether AC or DC.

Principal Block Diagram

The BSWM-4X4ER features four equivalent inputs and four equivalent outputs interconnected via a non-blocking matrix. A single input can route to multiple outputs without any loss of signal transmission.
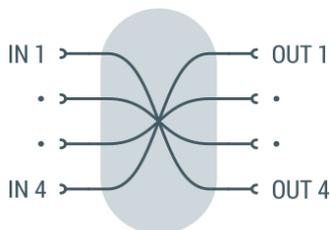

Wear-free Solid-State Switches

The BSWM-4X4ER incorporates modern solid-state switching elements, guaranteeing rapid response to operational inputs and an unlimited number of switching cycles with minimal maintenance requirements.

High Channel Isolation

To prevent unintentional signal coupling between different signal types, the device provides high channel isolation. Strong and weak signals in adjacent radio channels do not affect each other.

Versatile Control

The BSWM-4X4ER is equipped with multiple control options for user convenience. It features a local MMI on the front panel, as well as LAN and USB interfaces. Depending on the customer's needs, the system can be managed using the intuitive web-based graphical user interface or through SCPI-based ASCII commands via its interface ports.

Synchronous Operation

The BSWM-4X4ER offers two switching modes:

- Direct: every switching operation is executed after reception of the command.

- Synchronous: all switching commands are stored until a "SYNC" command executes the switching operation synchronously.

External Triggering

Similar to several other products from Becker Nachrichtentechnik GmbH, the BSWM-4X4ER includes a TRIGGER IO port. This physical interface enables the device to execute switching operations synchronously across multiple matrices, triggered by hardware signals.

RF Specification

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
impedance	Z_{IN}/Z_{OUT}		50		Ω	
number of inputs	N_{IN}		4			bi-directional, blocking
number of outputs	N_{OUT}		4			bi-directional, blocking
