

BSDU-1X8AR

8 Way Signal Conditioning Splitter/Combiner, 500...9000 MHz

Features

- extremely wideband
- bidirectional signal distribution
- health monitoring with SNMP

Applications

- Air interface emulation
- R&D (Research & Development)
- Product validation

Scope

BSDU-1X8AR is a wideband bi-directional splitter/combiner device, that distributes and combines signals from one common port to 8 equivalent ports. Each channel is equipped with a signal conditioning unit to individually adjust the signal level.

The frequency range extends a frequency range from 500 MHz to more than 9 GHz and is therefore suitable for the latest Wi-Fi and cellular communication channels such as 802.11ax, and 5G NR mmWave.

The device is suitable for use in air interface emulation applications and can be used in a flexible manner due to its excellent characteristics.

Device Monitoring

The BSDU-1X8AR offers a device monitoring function. The health status can be read out via LAN and USB remote interface. The health status gives information about the status and the temperature of the internal RF module. Also, identification can be queried in form of ASCII strings.

The LAN remote interface offers SNMPv2 (simple network management protocol) trap function for an operation in complex environments.

BSDU-1X8AR is able to identify failures and to inform the supervising system automatically.
